KEY COMPETENCIES

Programming Languages : Python, SQL

Frameworks & Libraries : Pandas, NumPy, Scikit-learn

Data Analysis & Visualization Tools : Power BI, Excel, Matplotlib, Seaborn, Plotly

Data Science & Engineering : Machine Learning

Development & Collaboration Tools : Jupyter Notebook, Colab

Soft Skills : Problem-solving, Analytical thinking

EDUCATION

Bachelor of Technology - Computer Science (Data Science) | CGPA: 8.95

2021-2025

Hindustan Institute of Technology and Science

PROJECTS

Digital Balance: Android App for Digital Wellbeing

- Led development of a personalized recommendation system to promote healthier screen habits.
- App features include screen time tracking, Time limit setter, weekly progress reports, and suggested offline activities tailored to user interests.
- Focused on backend logic using content-based filtering and cosine similarity for smart, adaptive suggestions.
- Designed to address digital overuse through data-driven insights and behavior-aware recommendation.

Tools: Python, Cosine Similarity, Android Studio, Jetpack Compose

Digital Archiving of Oral Tradition with Interactive LLM

- Led project planning, data collection, and preprocessing of speech and text to preserve and archive oral traditions.
- Aiming to provide users with engaging, interactive storytelling and cultural narratives.
- Fine-tuned Hugging Face transformers (DistillGPT) on the collected corpus to understand cultural narratives better.

Tools: Python, Jupyter Notebook, Hugging Face Transformers, Natural Language Processing (NLP)

Intelligent Data Analysis and Report Generation

- Developed a robust system for intelligent data analysis and report generation using Python.
- Leveraged machine learning models, including Linear Regression, KMeans Clustering, and Decision Trees, for comprehensive data insights.
- Enabled users to select features and generate tailored insights with visualizations, improving interpretability.
- Designed for non-technical users to explore structured data and extract actionable patterns.

Tools: Python, Scikit-learn, Pandas, Matplotlib, Seaborn

EXPERIENCE

Data Science & AI Training Program at Cognizant

MAY 2024

- Conducted exploratory data analysis to optimize stock management and reduce waste.
 - Utilized Excel and Python for data cleaning, modeling, and analysis.
 - Created interactive visualizations to derive actionable insights, enhancing decision-making processes.
 - Delivered projects on time, effectively communicating findings through detailed reports and visual dashboards, which leveraged operational efficiency.
-

CERTIFICATIONS & BADGE

Introduction to Large Language Models (Google Cloud)

AI/ML for Geodata Analysis (ISRO)

Data Analysis using Excel (Great learning)

Power BI for Beginners (simpliLearn)
