EDUCATION

Birla Institute of Technology and Science, Pilani
Bachelor of Engineering in Mechanical Engineering

Rajasthan, India
Aug 2023 – Present

EXPERIENCE

Full Stack Engineering Intern

Mar 2026 – Present

Callistra AI

- Building an AI workspace for financial analysts, processing **10,000+ documents**, reducing analysis time by **40%**
- Engineering scalable backend services using **FastAPI** + **WebSockets**, supporting users with **<500ms** latency
- Orchestrating event-driven notebook workflows using **AWS Boto3** + **Railway**, improving system responsiveness

Python Intern

Aug 2025 – Dec 2025

SYSSTRA - Convergence Futuristic Solution Enterprise Pvt. Ltd.

- Developed dividend-based trading algorithms enabling automated portfolio rebalancing across **100+ equities**
- Architected financial data pipelines using **Redis** and **AWS S3**, reducing latency for high-frequency analysis
- Implemented a back-testing engine processing **1M+** data points over years, accelerating strategy accuracy by **2x**

Machine Learning Intern

May 2025 – Jul 2025

Aditya Birla Group

- Deployed a corrosion detection model trained on **4,000+** images, enabling defect identification from camera feeds
- Automated dataset generation using **Selenium** for web scraping, increasing data quality and model generalization
- Developed a **TensorFlow.js** application for predictive fouling analysis, reducing manual inspection effort by **30%**

Software Development Intern

Dec 2024 – Jan 2025

Anitum

- Delivered production-grade **ERP** systems for education and manufacturing clients using **Flask** and **SQLite**
- Implemented **Computer Vision** pipelines processing camera feeds and integrated outputs into client dashboards
- Engineered **RESTful APIs** handling **5,000+ requests/day**, improving data accessibility and system reliability

PROJECTS

Yearbook Portal | *Postgres, Express, React, Node, DigitalOcean, Firebase*

- Engineered a **PERN** application enabling student profiles, media uploads, and leaderboard-based engagement
- Drove a **500%** increase in user engagement, generating **9,000+** submissions through performance optimizations

Tag Your Snap | *TypeScript, Python, Vite, Nginx, Docker*

- Automated photo-tagging workflow, reducing manual tagging time by **50+ hours** and boosting efficiency by **60%**
- Engineered secure, scalable backend with JWT auth, supporting **1K+** active users and achieving **99.9% uptime**

Readmebot | *Javascript, Node, OpenAI*

- AI-powered** CLI tool that auto-generates README.md file using **GPT-4**, with **500+** downloads in one week
- Built a **Node.js CLI** with support for **npx**, tokenized auth, subcommands, and **less than 1s** startup time

College Mess Portal | *React, API*

- Developed a mess menu for BITSians, gained **2000+ viewers within 7 days**, reaching **300+** daily active users
- Implemented real-time data tracking for society of mess services, displaying menu items for all three daily meals

TECHNICAL SKILLS

Certificates: Machine Learning Specialization with Stanford and DeepLearning.AI, AWS DevOps

Languages: Python, C, C++, Java, HTML, CSS, JavaScript, TypeScript, Lua, Tex

Databases & Cloud: PostgreSQL, MySQL, SQLite, AWS S3, Redis, DigitalOcean

Frameworks & Libraries: React, Next.js, Node.js, Express.js, Flask, OpenCV, PyTorch, NumPy, Pandas
